Many new, emerging diseases affect humans, livestock, and wildlife and potentially could be weaponized for criminal or terrorist uses.

Agricultural Terrorism is a variation of Bioterrorism that targets the health and productivity of livestock, crops, and wildlife.

Early notification of highly suspicious disease investigations are key for Law Enforcement to recognize and disrupt intentional, criminal, or terrorist attacks.

Develop Tools to Recognize Threats, Unusual, or Suspicious Disease Patterns:
- Active and Syndromic Surveillance
- Reportable Disease Lists
- Disease Awareness Training

Develop Notification Triggers/Thresholds for reporting unusual or suspicious disease to Law Enforcement.

Develop Information Sharing Tools between Animal/Plant Health Experts and Law Enforcement
- Agroterrorism Working Groups
- Terrorism/Intelligence Fusion Centers
