**RESOLUTION NUMBER: 1, 10, and 18 COMBINED**

**APPROVED**

**SOURCE: COMMITTEE ON ANIMAL EMERGENCY MANAGEMENT;  
COMMITTEE ON SWINE;  
COMMITTEE ON ANIMAL WELFARE**

**SUBJECT MATTER: National Veterinary Stockpile Resources for Mass Depopulation  
of Animals**

---

**BACKGROUND INFORMATION:**

Management of mass animal depopulation is a significant challenge for animal agriculture. Recent events, such as highly pathogenic avian influenza outbreaks and the processing disruption due to the COVID-19 pandemic, have highlighted gaps in resources available to deal with such events. Many different organizations, agencies, producers, veterinarians, and related animal industries have participated in exercises that highlight the challenges of mass depopulation of animals. Whether depopulation is for an animal health crisis, a natural disaster, or even a non-animal health related threat, as in the instance of COVID-19, methods and resources for acceptable and timely depopulation are scarce.

During the months since the identification of SARS-CoV-2 in the United States, a large-scale effort has been undertaken by state animal health officials, state pork associations, veterinarians, and producer organizations to identify areas of greatest need and to perform needed research in those areas. The outcomes of such research will provide further guidance regarding depopulation yet in 2020. Additional research focus in the area of depopulation and disposal is provided by funding from the United States Department of Agriculture, National Animal Disease Preparedness and Response Program for 2020; results and outcomes for projects initiated this year, however, will not be available until 2021 or later.

The United States Department of Agriculture National Veterinary Stockpile is designed to provide federal resources in the event of a national animal health crisis. Much of the resources available are relevant for management of poultry depopulation but do not adequately cover other farmed animal outbreak events. Resources that are available for use include personal protective equipment, limited animal handling equipment (gating, chutes etc.), and captive bolt guns. The amount and type of equipment needed to conduct depopulation of swine and other farmed animal species, however, is very limited in comparison to the greater need in the event of an outbreak or other disaster.

**RESOLUTION:**

The United States Animal Health Association urges the United States Department of Agriculture (USDA), Animal and Plant Health Inspection Service, Veterinary Services to utilize the results of current and future research to critically review, increase, and update the available resources within the USDA National Veterinary Stockpile to support rapid response to mass depopulation crises involving swine and other farmed animal species. In addition, information gained from such studies should be incorporated into the USDA Foreign Animal Disease Preparedness and Response Plan (FAD PReP)/National Animal Health Emergency Management System (NAHEMS) guidance and Standard Operating Procedures.
