

The U.S. Department of Agriculture, Animal and Plant Health Inspection Service, Veterinary Services (VS) concurs with this recommendation. In the second quarter of calendar year 2012, the VS National Center for Import and Export plans to formally incorporate complement-fixation testing into the standard equine import testing protocol, which already includes the competitive enzyme-linked immunosorbent assay. Before implementing this change, VS must notify brokers and importers about the new requirement and associated costs. Further, the National Veterinary Services Laboratories must prepare additional reagents to supply foreign laboratories that conduct preexport screening tests.
